

Trade Installer Benefits of ConservaBase

In addition to simply comparing the basic material costs of ConservaBase to a conventional build, it is important to properly understand the cost savings and benefits of using ConservaBase for building conservatory foundations, walls and floors. Therefore we have listed the benefits below.

The Cost Savings – Not to be underestimated

- **Manholes & Drains** – ConservaBase spans manholes and drains whilst still leaving them accessible. This eliminates the need for relocating them, saving several hundred pounds per manhole and drain in both materials and labour.
- **Sloping Ground** – ConservaBase is manufactured to accommodate sloping ground conditions with extended steelwork and brick skirt. This eliminates the need for building up brickwork, saving several hundred pounds in both materials and labour.
- **Skips** – ConservaBase sits on a few easily constructed concrete pads or foundation blocks and therefore requires minimal ground excavation. This eliminates or reduces the need for skips on site, saving money on both skip hire and labour.
- **Skills** – ConservaBase eliminates the skills needed to build conventional foundations and walls. With no builders or bricklayers required, your conservatory fitters can complete the whole job from start to finish. Its cheaper.
- **Time is Money** – ConservaBase installations are far easier and quicker to organise than conventional builds. The main benefits are:
 - No more time spent estimating quantity of materials and organising several deliveries of concrete, building materials and skips to site and being there to accept them. We will deliver ConservaBase direct to site for you, all in one go.
 - No more time spent trying to get builders to site. Your fitters can do it.
 - No time lost waiting for concrete to cure.
 - No time lost due to bad weather. ConservaBase can be fitted in the wet.
 - Complete around seven conservatory installations in the time it normally takes to complete one. This means you can complete far more jobs in a much smaller timeframe, keep fewer customers from waiting and employ fewer staff and subcontractors.
- **Less Come-Backs** – Organising jobs quicker, no builders messing your customers around, completing jobs in a fraction of the time, perfect brickwork every time and a clean undisturbed site. Keeping your customers happy will result in less bad debt and more recommendations.

The Benefits

- ConservaBase is manufactured and delivered in large fully welded sections. It is four times faster and substantially stronger than other steel base systems which are supplied in bar lengths with hundreds of nuts and bolts.
- A full list of other benefits can be seen in the accompanying leaflet and at conservabase.com.
